# QURE Patient Simulations

Empowering Consistent, Evidence-Based Care Decisions for Success in Value-Based Care

## Improve Care. Reduce Costs. Keep Patients Healthy.

QURE Patient Simulations engage primary care providers and APPs across the country with interactive patient cases to transform real-world patient care.

- Cases incorporate **high-priority clinical decisions** tied to key VBC metrics.
- Participants receive **real-time feedback** on the most **up-to-date evidence and guidelines**.
- Six cases per module provide the opportunity to **track changes in decision-making** over time.
- Group-wide performance insights** and **CME/MOC credits** available upon completion.

## QURE Value-Based Care Modules

**Guideline Directed Medical Therapy for HF<sub>r</sub>EF**

**Symptomatic COPD Management**

**Diabetes Care for Older Adults**

**Guideline Directed Medical Therapy for HF<sub>p</sub>EF**

**Care Transitions After COPD Hospitalization**

**Uncontrolled Diabetes Management**

**Advanced Heart Failure Management**

**Annual Wellness Visits**

**Polypharmacy Among Patients with Dementia**

QURE Patient Simulations and feedback address elements of a typical patient encounter:

- Diagnostic workup
- Clinical documentation (incl. HCC v28)
- Medication management
- Specialist referrals
- Support services
- Preventive care
- Social determinants of health assessment
- Follow-up care plan
